

### Chesapeake Energy Corporation Reports Financial and Operational Results for the 2008 Third Quarter

Company Reports 2008 Third Quarter Net Income to Common Shareholders of \$3.282 Billion, or \$5.61 per Fully Diluted Common Share; Adjusted Net Income Available to Common Shareholders Is \$486 Million, or \$0.85 per Fully Diluted Common Share, an Increase of 47% Over 2007 Third Quarter Company Reports 2008 Third Quarter Production of 2.3 Bcfe per Day, an Increase of 15% Over 2007 Third Quarter Production Proved Reserves Reach 12.1 Tcfe and Increase 11% Year-to-Date on 1.2 Tcfe of Net Additions; Company Delivers First Three Quarters of 2008 Reserve Replacement Rate of 290% and a Drilling and Net Acquisition Cost of \$1.35 per Mcfe

OKLAHOMA CITY--(BUSINESS WIRE)--Oct. 30, 2008--Chesapeake Energy Corporation (NYSE:CHK) today announced financial and operating results for the 2008 third quarter. For the quarter, Chesapeake reported net income to common shareholders of \$3.282 billion (\$5.61 per fully diluted common share), operating cash flow of \$1.400 billion (defined as cash flow from operating activities before changes in assets and liabilities) and ebitda of \$5.963 billion (defined as net income (loss) before income taxes, interest expense, and depreciation, depletion and amortization expense) on revenue of \$7.491 billion and production of 214 billion cubic feet of natural gas equivalent (bcfe). The results above include the following items that are typically not included in published estimates of the company's financial results by certain securities analysts:

- -- an unrealized noncash after-tax mark-to-market (MTM) gain of \$2.846 billion from future period natural gas, oil and interest rate hedges primarily resulting from lower natural gas and oil prices as of September 30, 2008 compared to June 30, 2008;
- -- an after-tax loss of \$19.0 million on the early redemption of the company's \$300 million 7.75% Senior Notes due 2015;
- -- an after-tax consent fee of \$6.3 million paid to amend certain provisions contained in five of the company's senior note indentures; and
- a reduction of net income available to common shareholders of \$24.5 million resulting from exchanges of the company's preferred stock for common stock that reduced future preferred stock dividend payment requirements.

Including the items noted above, Chesapeake reported adjusted net income to common shareholders during the quarter of \$486 million (\$0.85 per fully diluted common share) and adjusted ebitda of \$1.386 billion, increases of 47% and 16%, respectively, over the 2007 third quarter. A reconciliation of operating cash flow, ebitda, adjusted ebitda and adjusted net income to comparable financial measures calculated in accordance with generally accepted accounting principles is presented on pages 14 - 17 of this release.

Key Operational and Financial Statistics Summarized

The table below summarizes Chesapeake's key results during the 2008 third quarter and compares them to results during the 2008 second quarter and the 2007 third quarter.

- (e) defined as net income (loss) available to common shareholders, as adjusted to remove the effects of certain items detailed on page 16

2008 Third Quarter Average Daily Production Increases 15% over 2007 Third Quarter Production

Daily production for the 2008 third quarter averaged 2.321 bcfe, a decrease of 7 mmcfe, or 0.3%, over the 2.328 bcfe produced per day in the 2008 second quarter and an increase of 295 mmcfe, or 15%, over the 2.026 bcfe produced per day in the 2007 third quarter. Adjusted for the company's year-end 2007, second quarter 2008 and third quarter 2008 VPP sales of 55, 47 and 47 mmcfe per day, respectively, and the company's sale of Woodford Shale and Fayetteville Shale properties of 47 and 45 mmcfe per day, respectively, Chesapeake's sequential and year-over-year production growth rates were 3% and 23%, respectively. In addition, during the quarter hurricane-related production curtailments totaled approximately 1.6 bcfe while voluntary production cutbacks due to low wellhead natural gas prices totaled approximately 0.6 bcfe.

Chesapeake's average daily production for the 2008 third quarter consisted of 2.138 billion cubic feet of natural gas (bcf) and 30,543 barrels of oil and natural gas liquids (bbls). The company's 2008 third quarter production of 213.5 bcfe was comprised of 196.7 bcf (92% on a natural gas equivalent basis) and 2.81 million barrels of oil and natural gas liquids (mmbbls) (8% on a natural gas equivalent basis).

Natural Gas and Oil Proved Reserves Reach 12.1 Tcfe on 1.2 Tcfe of Net Additions; During the First Three Quarters of 2008, Company Delivers a Reserve Replacement Rate of 290% and a Drilling and Net Acquisition Cost of \$1.35 per Mcfe

Chesapeake began 2008 with estimated proved reserves of 10.879 trillion cubic feet of natural gas equivalent (tcfe) and ended the third quarter with 12.075 tcfe, an increase of 1.196 tcfe, or 11%. During the first three quarters of 2008, Chesapeake replaced 630 bcfe of production with an estimated 1.826 tcfe of new proved reserves for a reserve replacement rate of 290%. Reserve replacement through the drillbit was 2.286 tcfe, or 363% of production. This includes 1,128 bcfe of positive performance revisions (including 987 bcfe related to infill drilling and increased density locations) and 13 bcfe of positive revisions resulting from natural gas and oil price increases between December 31, 2007 and September 30, 2008. Acquisitions of proved reserves completed during the first three quarters of 2008 were 165 bcfe

at a cost of \$357 million, or \$2.16 per mcfe, while sales of proved reserves during the first three quarters of 2008 totaled 638 bcfe for proceeds of \$2.335 billion, or \$3.66 per mcfe. Sales of undeveloped leasehold during the first three quarters of 2008 generated proceeds of \$3.6 billion compared to a cost basis of approximately \$750 million for the leasehold sold.

Chesapeake's total drilling and net acquisition costs for the first three quarters of 2008 were \$1.35 per mcfe. This calculation excludes costs of \$3.3 billion for the acquisition of unproved properties and leasehold (net of sales), \$289 million for capitalized interest on unproved properties, \$234 million for seismic, and \$19 million relating to tax basis step-up and asset retirement obligations, as well as positive revisions of proved reserves from higher natural gas and oil prices. Excluding these items and acquisition and divestiture activity, Chesapeake's exploration and development costs through the drillbit during the first three quarters of 2008 were \$1.94 per mcfe. A complete reconciliation of finding and acquisition costs and a roll-forward of proved reserves are presented on page 12 of this release.

During the first three quarters of 2008, Chesapeake continued the industry's most active drilling program and drilled 1,435 gross operated wells (1,193 net with an average working interest of 83.1%) and participated in another 1,439 gross wells operated by other companies (195 net with an average working interest of 13.6%). The company's drilling success rate was 99% for company-operated wells and 97% for non-operated wells. Also during the first three quarters of 2008, Chesapeake invested \$3.852 billion in operated wells (using an average of 148 operated rigs) and \$576 million in non-operated wells (using an average of 118 non-operated rigs) for total drilling, completing and equipping costs of \$4.428 billion.

As of September 30, 2008, Chesapeake's estimated future net cash flows from proved reserves, discounted at an annual rate of 10% before income taxes (PV-10), were \$24.4 billion using field differential adjusted prices of \$6.48 per thousand cubic feet of natural gas (mcf) (based on a NYMEX quarter-end price of \$7.12 per mcf) and \$96.66 per bbl (based on a NYMEX quarter-end price of \$100.66 per bbl). Chesapeake's PV-10 changes by approximately \$420 million for every \$0.10 per mcf change in natural gas prices and approximately \$60 million for every \$1.00 per bbl change in oil prices. Chesapeake's enterprise value (market equity value plus long-term debt less working capital excluding current portion of derivative assets and liabilities) as of October 29, 2008 was approximately \$27 billion.

By comparison, the December 31, 2007 PV-10 of the company's proved reserves was \$20.6 billion (\$15.0 billion applying the SFAS 69 standardized measure) using field differential adjusted prices of \$6.19 per mcf (based on a NYMEX year-end price of \$6.80 per mcf) and \$90.58 per bbl (based on a NYMEX year-end price of \$96.00 per bbl). The September 30, 2007 PV-10 of the company's proved reserves was \$19.4 billion using field differential adjusted prices of \$5.85 per mcf (based on a NYMEX quarter-end price of \$6.38 per mcf) and \$76.76 per bbl (based on a NYMEX quarter-end price of \$81.56 per bbl).

The company calculates the standardized measure of future net cash flows in accordance with SFAS 69 only at year end because applicable income tax information on properties, including recently acquired natural gas and oil interests, is not readily available at other times during the year. As a result, the company is not able to reconcile the interim period-end values to the standardized measure at such dates. The only difference between the two measures is that PV-10 is calculated before considering the impact of future income tax expenses, while the standardized measure includes such effects.

In addition to the PV-10 value of its proved reserves and the very significant value of its undeveloped leasehold, particularly in the Haynesville, Marcellus, Barnett and Fayetteville shale plays, the net book value of the company's other assets (including gathering systems, compressors, land and buildings, investments and other non-current assets) was \$4.9 billion as of September 30, 2008, \$3.1 billion as of December 31, 2007 and \$2.9 billion as of September 30, 2007.

Average Realized Prices, Hedging Results and Hedging Positions Detailed

Average prices realized during the 2008 third quarter (including realized gains or losses from natural gas and oil derivatives, but excluding unrealized gains or losses on such derivatives) were \$8.02 per mcf and \$75.74 per bbl, for a realized natural gas equivalent price of \$8.38 per mcfe. Realized gains and losses from natural gas and oil hedging activities during the 2008 third quarter generated a \$0.71 loss per mcf and a \$37.79 loss per bbl for a 2008 third quarter realized hedging loss of \$246 million, or \$1.15 per mcfe. Excluding hedging activity, Chesapeake's average realized pricing basis differentials to NYMEX during the 2008 third quarter were a negative \$1.52 per mcf and a negative \$4.46 per bbl.

By comparison, average prices realized during the 2007 third quarter (including realized gains or losses from natural gas and oil derivatives, but excluding unrealized gains or losses on such derivatives) were \$7.41 per mcf and \$69.25 per bbl, for a realized natural gas equivalent price of \$7.76 per mcfe. Realized gains from natural gas and oil hedging activities during the 2007 third quarter generated a \$1.70 gain per mcf and a \$1.51 loss per bbl for a 2007 third quarter realized hedging gain of \$286 million, or \$1.53 per mcfe. Excluding hedging activity, Chesapeake's average realized pricing basis differentials to NYMEX during the 2007 third quarter were a negative \$0.45 per mcf and a negative \$4.62 per bbl.

The following tables summarize Chesapeake's open hedge position through swaps and collars as of October 30, 2008. Depending on changes in natural gas and oil futures markets and management's view of underlying natural gas and oil supply and demand trends, Chesapeake may either increase or decrease its hedging positions at any time in the future without notice.

Open Swap Positions as of October 30, 2008

Open Natural Gas Collar Positions as of October 30, 2008

Quarter or Year	Floor	e Aver Ceiling d \$ N\	_		
2008 Q4	======= 14% 	7.75	9.32 	 	
2009 Total	30%	7.21	9.27	 	
2010 Total	2%	7.71	11.46	 =======	=======

Certain open natural gas swap positions include knockout swaps with knockout provisions at \$6.50 per mcf covering 9 bcf in the 2008 fourth quarter, and prices ranging from \$5.65 to \$7.25 per mcf covering 150 bcf in 2009 and \$5.45 to \$7.40 per mcf covering 321 bcf in 2010. Certain open natural gas collar positions include three-way collars that include written put options with strike prices ranging from \$5.00 to \$6.00 per mcf covering 105 bcf in 2009 and at \$6.00 per mcf covering 4 bcf in 2010. Also, certain open oil swap positions include cap-swaps and knockout swaps with provisions limiting the counterparty's exposure below prices ranging from \$45 to \$60 per bbl covering 1 mmbbls in the 2008 fourth quarter, from \$50 to \$60 per bbl covering 6 mmbbls in 2009 and \$60 per bbl covering 5 mmbbls in 2010. As of October 24, 2008, Chesapeake's natural gas and oil hedging positions with a diversified group of 19 different counterparties had a positive mark-to-market (MTM) value of approximately \$1.0 billion.

The company's updated forecasts for 2008 through 2010 are attached to this release in an Outlook dated October 30, 2008, labeled as Schedule "A," which begins on page 18. This Outlook has been changed from the Outlook dated October 14, 2008 (attached as Schedule "B," which begins on page 23) to reflect various updated information.

Company Continues to Improve Balance Sheet and Liquidity

As a result of strong earnings growth and favorable changes in the MTM value of the company's open hedging positions during the 2008 third quarter, Chesapeake's net debt to book capitalization ratio decreased from 57% at June 30, 2008 to 43% at September 30, 2008. The company's goal is to end 2008 with cash and cash equivalents on hand or bank credit availability of approximately \$3.0 billion and to generate at least \$1.0 billion of excess cash in each of 2009 and 2010. The company's revolving credit facility matures in November 2012 and the first maturity of its senior unsecured notes is in July 2013.

#### Management Comments

Aubrey K. McClendon, Chesapeake's Chief Executive Officer, commented, "We are pleased to report our financial and operational results for the 2008 third quarter. During the quarter, we earned almost \$3.3 billion, improved our balance sheet and liquidity and closed approximately \$7.5 billion of asset monetization transactions. Those transactions included selling a VPP for approximately \$600 million in cash, selling 20% of our Haynesville Shale properties for \$3.3 billion in cash and drilling carries, selling 25% of our Fayetteville Shale properties for \$1.9 billion in cash and drilling carries and selling 100% of our remaining Woodford Shale properties for \$1.7 billion in cash. Furthermore we are progressing on additional asset monetizations for the 2008 fourth quarter and we look forward to disclosing the details of these transactions later this quarter.

"Although financial market volatility remains high, Chesapeake is very well-positioned to continue growing and creating value in the 2008 fourth quarter and in 2009 and 2010. Our commodity hedges, our Haynesville and Fayetteville Shale drilling cost carries, our progress in the Marcellus Shale and our balance sheet, which has \$2.0 billion in cash on it and requires no debt payments for four years, should enable Chesapeake to prosper during these difficult economic times. I am very excited to see the company continue realizing its full potential through the ongoing execution of our successful strategy and the full development of our top-tier properties."

#### Conference Call Information

A conference call to discuss this release has been scheduled for Friday morning, October 31, 2008, at 9:00 a.m. EDT. The telephone number to access the conference call is 913-312-1437 or toll-free 888-240-9345. The passcode for the call is 7433119. We encourage those who would like to participate in the call to dial the access number between 8:50 and 9:00 a.m. EDT. For those unable to participate in the conference call, a replay will be available for audio playback from 2:00 p.m. EDT on October 31, 2008 through midnight EST on Friday, November 14, 2008. The number to access the conference call replay is 719-457-0820 or toll-free 888-203-1112. The passcode for the replay is 7433119. The conference call will also be webcast live on the Internet and can be accessed by going to Chesapeake's website at www.chk.com and selecting the "News & Events" section. The webcast of the conference call will be available on our website for one year.

This press release and the accompanying Outlooks include "forward-looking statements" within the meaning of Section 27A of the Securities Act of 1933 and Section 21E of the Securities Exchange Act of 1934. Forward-looking statements give our current expectations or forecasts of future events. They include estimates of natural gas and oil reserves, expected natural gas and oil production and future expenses, assumptions regarding future natural gas and oil prices, planned capital expenditures for drilling, leasehold acquisitions and seismic data and planned asset sales, as well as statements concerning anticipated cash flow and liquidity, business strategy and other plans and objectives for future operations. Disclosures concerning the fair value of derivative contracts and their estimated contribution to our future results of operations are based upon market information as of a specific date. These market prices are subject to significant volatility. We caution you not to place undue reliance on our forward-looking statements, which speak only as of the date of this press release, and we undertake no obligation to update this information.

Factors that could cause actual results to differ materially from expected results are described in "Risk Factors" in the Prospectus Supplement we filed with the U.S. Securities and Exchange Commission on July 10, 2008. These risk factors include the volatility of natural gas and oil prices; the limitations our level of indebtedness may have on our financial flexibility; our ability to compete effectively against strong independent natural gas and oil companies and majors; the availability of capital on an economic basis, including planned asset monetization transactions, to fund reserve replacement costs; our ability to replace reserves and sustain production; uncertainties inherent in estimating quantities of natural gas and oil reserves and projecting future rates of production and the amount and timing of development expenditures; uncertainties in evaluating natural gas and oil reserves of acquired properties and associated potential liabilities; our ability to effectively consolidate and integrate acquired properties and operations; unsuccessful exploration and development drilling; declines in the values of our natural gas and oil properties resulting in ceiling test write-downs; lower prices realized on natural gas and oil sales and collateral required to secure hedging liabilities resulting from our commodity price risk management activities; the negative impact lower natural gas and oil prices could have on our ability to borrow; drilling and operating risks, including potential environmental liabilities; production interruptions that could adversely affect our cash flow; and pending or future litigation.

Our production forecasts are dependent upon many assumptions, including estimates of production decline rates from existing wells and the outcome of future drilling activity. Although we believe the expectations and forecasts reflected in these and other forward-looking statements are reasonable, we can give no assurance they will prove to have been correct. They can be affected by inaccurate assumptions or by known or unknown risks and uncertainties.

Chesapeake Energy Corporation is the largest producer of natural gas in the U.S. Headquartered in Oklahoma City, the company's operations are focused on exploratory and developmental drilling and corporate and property acquisitions in the Fort Worth Barnett Shale, Haynesville Shale, Fayetteville Shale, Anadarko Basin, Arkoma Basin, Appalachian Basin, Permian Basin, Delaware Basin, South Texas, Texas Gulf Coast and Ark-La-Tex regions of the United States. Further information is available at www.chk.com.

(a) Includes 1,128 bcfe of positive performance revisions (987 bcfe relating to infill drilling and increased density locations and 141 bcfe of other performance related revisions) and excludes positive revisions of 13 bcfe resulting from natural gas and oil price increases between December 31, 2007 and September 30, 2008.

#### CHESAPEAKE ENERGY CORPORATION ROLL-FORWARD OF PROVED RESERVES NINE MONTHS ENDED SEPTEMBER 30, 2008 (unaudited)

	Bcfe
Beginning balance, 01/01/08 Production Acquisitions Divestitures Revisions - performance Revisions - price Extensions and discoveries	10,879 (630) 165 (638) 1,128 13 1.158
Ending balance, 09/30/08	12,075
Reserve replacement Reserve replacement ratio (a)	1,826 290%

(a) The company uses the reserve replacement ratio as an indicator of the company's ability to replenish annual production volumes and grow its reserves. It should be noted that the reserve replacement ratio is a statistical indicator that has limitations. The ratio is limited because it typically varies widely based on the extent and timing of new discoveries and property acquisitions. Its predictive and comparative value is also limited for the same reasons. In addition, since the ratio does not embed the cost or timing of future production of new reserves, it cannot be used as a measure of value creation.

OPERATING CASH FLOW(1) \$ 1,400 \$ 1,443 \$ 1,085

(1) Operating cash flow represents net cash provided by operating activities before changes in assets and liabilities. Operating cash flow is presented because management believes it is a useful adjunct to net cash provided by operating activities under accounting principles generally accepted in the United States (GAAP). Operating cash flow is widely accepted as a financial indicator of a natural gas and oil company's ability to generate cash which is used to internally fund exploration and development activities and to service debt. This measure is widely used by investors and rating agencies in the valuation, comparison, rating and investment recommendations of companies within the natural gas and oil exploration and production industry. Operating cash flow is not a measure of financial performance under GAAP and should not be considered as an alternative to cash flows from operating, investing or financing activities as an indicator of cash flows, or as a measure of liquidity.

(2) Ebitda represents net income (loss) before income tax expense, interest expense and depreciation, depletion and amortization expense. Ebitda is presented as a supplemental financial measurement in the evaluation of our business. We believe that it provides additional information regarding our ability to

meet our future debt service, capital expenditures and working capital requirements. This measure is widely used by investors and rating agencies in the valuation, comparison, rating and investment recommendations of companies. Ebitda is also a financial measurement that, with certain negotiated adjustments, is reported to our lenders pursuant to our bank credit agreement and is used in the financial covenants in our bank credit agreement and our senior note indentures. Ebitda is not a measure of financial performance under GAAP. Accordingly, it should not be considered as a substitute for net income, income from operations, or cash flow provided by operating activities prepared in accordance with GAAP. Ebitda is reconciled to cash provided by operating activities as follows:

SCHEDULE "A"

CHESAPEAKE'S OUTLOOK AS OF OCTOBER 30, 2008

Quarter Ending December 31, 2008 and Years Ending December 31, 2009 and 2010.

We have adopted a policy of periodically providing guidance on certain factors that affect our future financial performance. As of October 30, 2008, we are using the following key assumptions in our projections for the fourth quarter of 2008 and the full years 2009 and 2010.

The primary changes from our October 14, 2008 Outlook are in italicized bold and are explained as follows:

- 1) Natural gas production assumption for the quarter ending 12/31/08 has been reduced to reflect anticipated voluntary curtailments due to low wellhead price realizations;
- 2) Projected effects of changes in our hedging positions have been updated;
- 3) Our NYMEX natural gas and oil price assumptions for realized hedging effects and estimating future operating cash flow have been reduced for the quarter ending 12/31/08; and
- 4) Certain cost and cash income tax assumptions have been updated.

        Net Cash Change $1,725 - 2,025 $1,300 -1,525 $1,250 - 1,725
```

- (a) The 2008 fourth quarter production and cash flow forecasts reflect anticipated sales by the company of: 1) producing properties for approximately \$450 million in a volumetric production payment (VPP); and 2) producing properties in South Texas and undeveloped leasehold in the Marcellus Shale and other areas for approximately \$2.3 billion. The 2009 and 2010 production and cash flow forecasts reflect anticipated sales by the company of: 1) producing properties for approximately \$1.1 billion in each year in VPP transactions; and 2) undeveloped leasehold or other producing properties for approximately \$1.6 billion in each year.
- (b) NYMEX natural gas prices have been updated for actual contract prices through October 2008.
- (c) Severance tax per mcfe is based on NYMEX prices of \$60.00 per bbl of oil and \$6.50 to \$7.50 per mcf of natural gas during the 2008 fourth quarter; \$80.00 per bbl of oil and \$7.50 to \$8.50 per mcf of natural gas during 2009; and \$80.00 per bbl of oil and \$7.50 to \$8.50 per mcf of natural gas during 2010.
- (d) Excludes expenses associated with noncash stock compensation.
- (e) Does not include gains or losses on interest rate derivatives (SFAS 133).
- (f) A non-GAAP financial measure. We are unable to provide a reconciliation to projected cash provided by operating activities, the most comparable GAAP measure, because of uncertainties associated with projecting future changes in assets and liabilities.
- (g) Assumes NYMEX natural gas prices of \$6.50 to \$7.50 per mcf and NYMEX oil prices of \$60.00 per bbl in the 2008 fourth guarter and NYMEX natural gas prices of \$7.00 to \$8.00 per mcf and NYMEX oil prices

of \$80.00 per bbl in 2009 and 2010.

#### Commodity Hedging Activities

The company utilizes hedging strategies to hedge the price of a portion of its future natural gas and oil production. These strategies include:

- (i) For swap instruments, Chesapeake receives a fixed price and pays a floating market price to the counterparty. The fixed-price payment and the floating-price payment are netted, resulting in a net amount due to or from the counterparty.
- (ii) Basis protection swaps are arrangements that guarantee a price differential for oil or natural gas from a specified delivery point. For Mid-Continent basis protection swaps, which have negative differentials to NYMEX, Chesapeake receives a payment from the counterparty if the price differential is greater than the stated terms of the contract and pays the counterparty if the price differential is less than the stated terms of the contract. For Appalachian basis protection swaps, which have positive differentials to NYMEX, Chesapeake receives a payment from the counterparty if the price differential is less than the stated terms of the contract and pays the counterparty if the price differential is greater than the stated terms of the contract.
- (iii) For knockout swaps, Chesapeake receives a fixed price and pays a floating market price. The fixed price received by Chesapeake includes a premium in exchange for the possibility to reduce the counterparty's exposure to zero, in any given month, if the floating market price is lower than certain predetermined knockout prices.
- (iv) For cap-swaps, Chesapeake receives a fixed price and pays a floating market price. The fixed price received by Chesapeake includes a premium in exchange for a "cap" limiting the counterparty's exposure. In other words, there is no limit to Chesapeake's exposure but there is a limit to the downside exposure of the counterparty
- (v) For written call options, Chesapeake receives a premium from the counterparty in exchange for the sale of a call option. If the market price exceeds the fixed price of the call option, Chesapeake pays the counterparty such excess. If the market price settles below the fixed price of the call option, no payment is due from Chesapeake.
- (vi) Collars contain a fixed floor price (put) and ceiling price (call). If the market price exceeds the call strike price or falls below the put strike price, Chesapeake receives the fixed price and pays the market price. If the market price is between the call and the put strike price, no payments are due from either party.
- (vii) A three-way collar contract consists of a standard collar contract plus a written put option with a strike price below the floor price of the collar. In addition to the settlement of the collar, the put option requires Chesapeake to make a payment to the counterparty equal to the difference between the put option price and the settlement price if the settlement price for any settlement period is below the put option strike price.

Commodity markets are volatile, and as a result, Chesapeake's hedging activity is dynamic. As market conditions warrant, the company may elect to settle a hedging transaction prior to its scheduled maturity date and lock in the gain or loss on the transaction.

Chesapeake enters into natural gas and oil derivative transactions in order to mitigate a portion of its exposure to adverse market changes in natural gas and oil prices. Accordingly, associated gains or losses from the derivative transactions are reflected as adjustments to natural gas and oil sales. All realized gains and losses from natural gas and oil derivatives are included in natural gas and oil sales in the month of related production. Pursuant to SFAS 133, certain derivatives do not qualify for designation as cash flow hedges. Changes in the fair value of these nonqualifying derivatives that occur prior to their maturity (i.e., because of temporary fluctuations in value) are reported currently in the consolidated statement of operations as unrealized gains (losses) within natural gas and oil sales.

Following provisions of SFAS 133, changes in the fair value of derivative instruments designated as cash flow hedges, to the extent effective in offsetting cash flows attributable to hedged risk, are recorded in other comprehensive income until the hedged item is recognized in earnings. Any change in fair value resulting from ineffectiveness is recognized currently in natural gas and oil sales.

Excluding the swaps assumed in connection with the acquisition of CNR which are described below, the company currently has the following open natural gas swaps in place and also has the following gains (losses) from lifted natural gas swaps:

#### (1) weighted average

We assumed certain liabilities related to open derivative positions in connection with the CNR acquisition in November 2005. In accordance with SFAS 141, these derivative positions were recorded at fair value in the purchase price allocation as a liability of \$592 million (\$76 million as of September 30, 2008). The recognition of the derivative liability and other assumed liabilities resulted in an increase in the total purchase price which was allocated to the assets acquired. Because of this accounting treatment, only cash settlements for changes in fair value subsequent to the acquisition date for the derivative positions assumed result in adjustments to our natural gas and oil revenues upon settlement. For example, if the fair value of the derivative positions assumed does not change, then upon the sale of the underlying production and corresponding settlement of the derivative positions, cash would be paid to the counterparties and there would be no adjustment to natural gas and oil revenues related to the derivative positions. If, however, the actual sales price is different from the price assumed in the original fair value calculation, the difference would be reflected as either a decrease or increase in natural gas and oil revenues, depending upon whether the sales price was higher or lower, respectively, than the prices assumed in the original fair value calculation. For accounting purposes, the net effect of these acquired hedges is that we hedged the production volumes listed below at their fair values on the date of our acquisition of CNR.

Pursuant to SFAS 149 "Amendment of SFAS 133 on Derivative Instruments and Hedging Activities," the assumed CNR derivative instruments are deemed to contain a significant financing element and all cash flows associated with these positions are reported as financing activity in the statement of cash flows.

The following details the CNR derivatives (natural gas swaps) we have assumed:

Note: Not shown above are written call options covering 768 mbbls of production in 2008 at a weighted average price of \$85.86 for a weighted average premium of \$4.05, 5,110 mbbls of production in 2009 at a weighted average price of \$133.93 for a weighted average premium of \$3.90 and 5,110 mbbls of production in 2010 at a weighted average price of \$140.00 for a weighted average premium of \$4.46.

SCHEDULE "B"

CHESAPEAKE'S PREVIOUS OUTLOOK AS OF OCTOBER 14, 2008

(PROVIDED FOR REFERENCE ONLY)

NOW SUPERSEDED BY OUTLOOK AS OF OCTOBER 30, 2008

Quarter Ending December 31, 2008 and Years Ending December 31, 2009 and 2010.

We have adopted a policy of periodically providing guidance on certain factors that affect our future financial performance. As of October 14, 2008, we are using the following key assumptions in our projections for the fourth quarter of 2008 and the full years 2009 and 2010.

The primary changes from our September 22, 2008 Outlook are in italicized bold and are explained as follows:

- 1) Projected effects of changes in our hedging positions have been updated;
- 2) Certain cost assumptions and budgeted capital expenditure assumptions have been updated;
- 3) Our NYMEX oil price assumption for realized hedging effects and estimating future operating cash flow has been reduced; and
- 4) Shares outstanding have been updated to remove the effects of certain contingent convertible senior notes that are not presently convertible at the current stock price level.

(a) The 2008 fourth quarter production and cash flow forecasts reflect anticipated sales by the company of: 1) producing properties for approximately \$450 million in a volumetric production payment (VPP); and 2) producing properties in South Texas and undeveloped leasehold in the Marcellus Shale and other areas for approximately \$2.3 billion. The 2009 and 2010 production and cash flow forecasts reflect anticipated sales by the company of: 1) producing properties for approximately \$1.1 billion in each year in VPP transactions; and 2) undeveloped leasehold or other producing properties for approximately \$1.6 billion in each year.

- (b) NYMEX natural gas prices have been updated for actual contract prices through October 2008.
- (c) Severance tax per mcfe is based on NYMEX prices of \$80.00 per bbl of oil and \$7.50 to \$8.50 per mcf of natural gas during Q4 2008; \$80.00 per bbl of oil and \$7.50 to \$8.50 per mcf of natural gas during 2009; and \$80.00 per bbl of oil and \$7.50 to \$8.50 per mcf of natural gas during 2010.
- (d) Excludes expenses associated with noncash stock compensation.
- (e) Does not include gains or losses on interest rate derivatives (SFAS 133).
- (f) A non-GAAP financial measure. We are unable to provide a reconciliation to projected cash provided by operating activities, the most comparable GAAP measure, because of uncertainties associated with projecting future changes in assets and liabilities.
- (g) Assumes NYMEX natural gas of \$7.00 to \$8.00 per mcf and NYMEX oil prices of \$80.00 per bbl.

**Commodity Hedging Activities** 

The company utilizes hedging strategies to hedge the price of a portion of its future natural gas and oil production.

These strategies include:

- (i) For swap instruments, Chesapeake receives a fixed price and pays a floating market price to the counterparty. The fixed-price payment and the floating-price payment are netted, resulting in a net amount due to or from the counterparty.
- (ii) Basis protection swaps are arrangements that guarantee a price differential for oil or natural gas from a specified delivery point. For Mid-Continent basis protection swaps, which have negative differentials to NYMEX, Chesapeake receives a payment from the counterparty if the price differential is greater than the stated terms of the contract and pays the counterparty if the price differential is less than the stated terms of the contract. For Appalachian basis protection swaps, which have positive differentials to NYMEX, Chesapeake receives a payment from the counterparty if the price differential is less than the stated terms of the contract and pays the counterparty if the price differential is greater than the stated terms of the contract.
- (iii) For knockout swaps, Chesapeake receives a fixed price and pays a floating market price. The fixed price received by Chesapeake includes a premium in exchange for the possibility to reduce the counterparty's exposure to zero, in any given month, if the floating market price is lower than certain predetermined knockout prices.
- (iv) For cap-swaps, Chesapeake receives a fixed price and pays a floating market price. The fixed price received by Chesapeake includes a premium in exchange for a "cap" limiting the counterparty's exposure. In other words, there is no limit to Chesapeake's exposure but there is a limit to the downside exposure of the counterparty
- (v) For written call options, Chesapeake receives a premium from the counterparty in exchange for the sale of a call option. If the market price exceeds the fixed price of the call option, Chesapeake pays the counterparty such excess. If the market price settles below the fixed price of the call option, no payment is due from Chesapeake.
- (vi) Collars contain a fixed floor price (put) and ceiling price (call). If the market price exceeds the call strike price or falls below the put strike price, Chesapeake receives the fixed price and pays the market price. If the market price is between the call and the put strike price, no payments are due from either party.
- (vii) A three-way collar contract consists of a standard collar contract plus a written put option with a strike price below the floor price of the collar. In addition to the settlement of the collar, the put option requires Chesapeake to make a payment to the counterparty equal to the difference between the put option price and the settlement price if the settlement price for any settlement period is below the put option strike price.

Commodity markets are volatile, and as a result, Chesapeake's hedging activity is dynamic. As market conditions warrant, the company may elect to settle a hedging transaction prior to its scheduled maturity date and lock in the gain or loss on the transaction.

Chesapeake enters into natural gas and oil derivative transactions in order to mitigate a portion of its exposure to adverse market changes in natural gas and oil prices. Accordingly, associated gains or losses from the derivative transactions are reflected as adjustments to natural gas and oil sales. All realized gains and losses from natural gas and oil derivatives are included in natural gas and oil sales in the month of related production. Pursuant to SFAS 133, certain derivatives do not qualify for designation as cash flow hedges. Changes in the fair value of these nonqualifying derivatives that occur prior to their maturity (i.e., because of temporary fluctuations in value) are reported currently in the consolidated statement of operations as unrealized gains (losses) within natural gas and oil sales.

Following provisions of SFAS 133, changes in the fair value of derivative instruments designated as cash flow hedges, to the extent effective in offsetting cash flows attributable to hedged risk, are recorded in other comprehensive income until the hedged item is recognized in earnings. Any change in fair value resulting from ineffectiveness is recognized currently in natural gas and oil sales.

Excluding the swaps assumed in connection with the acquisition of CNR which are described below, the company currently has the following open natural gas swaps in place and also has the following gains (losses) from lifted natural gas swaps:

Avg. Assuming % of (Losses) (Loss) per
NYMEX Natural Estimated from Mcf of
Open Strike Gas Total Lifted Estimated
Swaps Price Production Natural Swaps Total

#### (1) weighted average

We assumed certain liabilities related to open derivative positions in connection with the CNR acquisition in November 2005. In accordance with SFAS 141, these derivative positions were recorded at fair value in the purchase price allocation as a liability of \$592 million (\$102 million as of June 30, 2008). The recognition of the derivative liability and other assumed liabilities resulted in an increase in the total purchase price which was allocated to the assets acquired. Because of this accounting treatment, only cash settlements for changes in fair value subsequent to the acquisition date for the derivative positions assumed result in adjustments to our natural gas and oil revenues upon settlement. For example, if the fair value of the derivative positions assumed does not change, then upon the sale of the underlying production and corresponding settlement of the derivative positions, cash would be paid to the counterparties and there would be no adjustment to natural gas and oil revenues related to the derivative positions. If, however, the actual sales price is different from the price assumed in the original fair value calculation, the difference would be reflected as either a decrease or increase in natural gas and oil revenues, depending upon whether the sales price was higher or lower, respectively, than the prices assumed in the original fair value calculation. For accounting purposes, the net effect of these acquired hedges is that we hedged the production volumes listed below at their fair values on the date of our acquisition of CNR.

Pursuant to SFAS 149 "Amendment of SFAS 133 on Derivative Instruments and Hedging Activities," the assumed CNR derivative instruments are deemed to contain a significant financing element and all cash flows associated with these positions are reported as financing activity in the statement of cash flows.

The following details the CNR derivatives (natural gas swaps) we have assumed:

Open Swap Avg. **Positions** NYMEX as a % Strike Avg. Fair Assuming of Price Value Upon Natural Estimated Open Of Open Acquisition Initial Gas Total Swaps Swaps of Liability Production Natural (per Open Swaps Acquired in Bcf's Gas Bcf's Mcf) (per Mcf) (per Mcf) of: Production \_\_\_\_\_\_

Total 2009 18.3 \$5.18 \$7.28 (\$2.10) 903 2%

Note: Not shown above are collars covering 3.7 bcf of production in 2009 at an average floor and ceiling of \$4.50 and \$6.00.

The company also has the following crude oil swaps in place:

Open Swap Total Total Positions Losses Lifted Assuming as a % from Losses per Open Avg. Oil of Lifted bbl of Swaps NYMEX Production Estimated Swaps Estimated in Strike in mbbls Total Oil (\$ Total Oil mbbls Price of: Production millions) Production

=====	====	=====		=====			=====	=====	=====		=====		=

(1) Certain hedging arrangements include cap-swaps and knockout swaps with provisions limiting the counterparty's exposure below prices ranging from \$45.00 to \$60.00 covering 1,104 mbbls in 2008, from \$52.50 to \$60.00 covering 7,848 mbbls in 2009 and \$60.00 covering 4,745 mbbls in 2010.

Note: Not shown above are written call options covering 890 mbbls of production in 2008 at a weighted average price of \$86.43 for a weighted average premium of \$3.63, 3,285 mbbls of production in 2009 at a weighted average price of \$122.22 for a weighted average premium of \$6.07 and 3,285 mbbls of production in 2010 at a weighted average price of \$131.67 for a weighted average premium of \$6.94.
